KW Clubsport Coilovers

The KW Clubsport has been developed for the enthusiast who requires a more aggressive setup for racetrack events while retaining street use of their vehicle. The Clubsports are outfitted with high quality racing top mounts, increased spring rates and tuned valving. All applications feature adjustable (and independent reacting) rebound and compression damping for a personalized performance driving setup.

Also available: KW Coilovers, Variant 3

The Variant 3 utilizes professional motorsport technology for the performance minded driver. The independent reacting compression and rebound adjustability allows for a truly customizable driving set-up. Adjustments are made in the low-speed range of the piston rod movement, while the high-speed set-up, so decisive for comfort, has been pre set by KW engineers.
