## PRESS RELEASE

August 2007

IMMEDIATE RELEASE

### **Belltech Street Performance Lowering and Lifting Shock Absorber**

Belltech announces their "Street Performance" Lowering and Lifting shock for the front-end of trucks and SUV's. Belltech's Street Performance Lowering and Lifting shock absorber offers the customer flexibility in ride height adjustment and an OEM replacement quality shock absorber with performance handling characteristics.

The Street Performance shock absorber utilizes a 15mm piston rod and 50mm shock body to provide the control required by larger OE and aftermarket wheel/tire packages. The combination of the relocated spacer perch and spacer collars allows flexibility in ride height adjustment. It provides an average range of adjustment for most applications between 2" of lowering and 2" of lift, in ½" increments. Some applications may vary.

Each Street Performance shock absorber features a nitrogen charged twin tube construction which provides "cavitation free" technology to avoid air from decreasing the shock absorbers effectiveness. Piston rod bushings and shock pistons are Teflon coated to provide the lowest amount of friction. Triple Lip NBR Seal provides (2 oil lips, 1 dust lip) 3 areas of contact on which rubber seals contact and seal the piston rod. This added security prevents against leaks, oil contamination or deterioration of the seals.

Please see Belltech catalog or website for specific applications. [www.belltechcorp.com](http://www.belltechcorp.com)
