PRESS RELEASE

June 2006

IMMEDIATE RELEASE

KW Variant 3 coilover suspension for 2006+ Audi S6

KW suspensions announces their Variant 3 stainless steel constructed coil-over for the 2006+ Audi S6.

The KW coilover suspensions for the 2006+ Audi S6 enables the owner to lower their vehicle 0-40mm on the front axle and 0-40mm on the rear axle and retains enough travel to handle maximum load and dynamic loads during driving. Variant 3 permits an even higher degree of customization to the suspension. Adjustable (and independent reacting) rebound and compression damping allows a truly individual performance driving setup for those technically demanding drivers. Compression dampening adjustment is conducted in the low-speed range, while the high-speed set-up, so decisive for driving comfort, has been pre set by KW engineers.

Important characteristics such as safety, quality and performance are all taken into consideration with each KW coilover design. Each vehicle application is specifically designed and engineered for a proper range of motion, min/max weight loads and min/max lowering. All these requirements are met while retaining it's performance handling characteristics. Each KW coilover suspension is produced with unique stainless steel "inox-line" technology. The stainless steel construction internally and externally provides long term durability and corrosion resistance from the elements.

All KW coilovers pass stringent German TUV safety and quality testing standards. Each kit is sold TUV approved.
