PRESS RELEASE

August 2007

IMMEDIATE RELEASE

KW Variant 3 coilover suspension for 2006+ Z06 Chevrolet Corvette

KW suspensions announces their Variant 3 stainless steel constructed coilover for the 2006+ Z06 Chevrolet Corvette. The KW coilovers replaces the factory transverse leaf springs and stock shocks with a complete coil-over suspension solution.

The KW suspensions coilover for the Z06 Corvette enables the owner to lower their vehicle 0-30mm on the front axle and 0-30mm on the rear axle and retains enough travel to handle maximum load and dynamic loads during driving. Adjustable (and independent reacting) rebound and compression damping allows a truly individual performance driving setup for those technically demanding drivers. Compression dampening adjustment is conducted in the low-speed range, while the high-speed set-up, so decisive for driving comfort, has been pre-set by KW engineers.

Important characteristics such as safety, quality and performance are all taken into consideration with each KW coilover design. Each vehicle application is specifically designed and engineered for a proper range of motion, min/max weight loads and min/max lowering. All these requirements are met while retaining it's performance handling characteristics. Each KW coilover suspension is produced with unique stainless steel "inox-line" technology. The stainless steel construction internally and externally provides long term durability and corrosion resistance from the elements.

All KW coilovers pass stringent German TUV safety and quality testing standards. Each kit is sold TUV approved.
