PRESS RELEASE

January 2007

IMMEDIATE RELEASE

KW 3 way adjustable Competition Coilover for Nissan S13, S14 & S15

KW 3 way adjustable racing coilover is now available for each Nissan S-series application. KW 3 adjustable Competition Coilover represents the latest in mono tube technology, and is designed to be used in Professional Motorsport. KW's 3 way solution offers one of the broadest and most significant adjustment ranges found in the industry today. Virtually unaffected by increasing operation temperatures, the 3 way system is easily maintainable and can be serviced at the track. KW 3 way systems differ significantly in valve technology compared to conventional monotube shock absorbers using shimmed valve stacks. The 3 ways rebound forces are relying on preloaded jets, running on special needles. The main compression forces are managed by a versatile pre-configurable blow off valve. Every 3 way system features separate low and high speed compression adjustments on the remote reservoir, with low speed rebound adjustments on the piston rod.

MSRP: \$7,090.00
