PRESS RELEASE

July 2006

IMMEDIATE RELEASE

KW Variant 2 coilover suspension for 2005-2006 Scion TC

KW suspensions announces their Variant 2 stainless steel constructed coil-over for the 2005-2006 Scion TC.

Important characteristics such as safety, quality and performance are all taken into consideration with each KW coilover design. Each vehicle application is specifically designed and engineered for a proper range of motion, min/max weight loads and min/max lowering. All these requirements are met while retaining its performance handling characteristics. Each KW coilover suspension is produced with unique stainless steel "inox-line" technology. The stainless steel construction internally and externally provides long term durability and corrosion resistance from the elements.

The KW coilover suspensions for the 2005-2006 Scion TC enables the owner to lower their vehicle 25-60mm on the front axle and 25-60mm on the rear axle and retains enough travel to handle maximum load and dynamic loads during driving. Variant 2 is the ideal system for sporty drivers, who also wish to make modifications in ride height and rebound dampening. The adjustable rebound damper allows adjustment of the pitch and roll behavior of the vehicle, adapting it to one's own driving style.

All KW coilovers pass stringent German TUV safety and quality testing standards. Each kit is sold TUV approved. Part No. 15258002 MSRP - \$1575.00
