PRESS RELEASE

July 2007

IMMEDIATE RELEASE

ST suspensions Anti-Sway bars for the 2006 Honda Civic (excluding SI)

ST suspensions (formerly Suspension Techniques) announces their front and rear anti-sway bar set for the 2006 Honda Civic (excluding SI model).

The ST suspensions anti-sway bars for the 2006 Honda Civic replace both front and rear stock anti-sway bars with solid construction anti-sway bars. The front 1.00 inch stock hollow type anti-sway bar is replaced with a 1.00 inch solid construction anti-sway bar. The .450 inch stock solid sway bar is replaced with a .625 inch solid construction anti-sway bar. Sway bar forces are increased 205% on the front axle and 155% the rear.

Performance and comfort characteristics are taken into consideration with each ST suspensions anti-sway bar design. Incorporating 20 plus years of design experience, ST suspensions anti-sway bars are manufactured from cold formed solid steel and use swaged ends for their superior strength and reliability. All ST suspensions anti-sway bars include high grade mounting hardware, polyurethane bushings and are powder coated for a lasting finish.

Front	- Part No. 50159	MSRP: \$222.00
Rear	- Part No. 51159	MSRP: \$210.00
Set	- Part No. 52159	MSRP: \$408.00
