PRESS RELEASE

June 2007

IMMEDIATE RELEASE

ST suspensions Anti-Sway bars for 2006 Ford Fusion

ST suspensions (formerly Suspension Techniques) announces their front and rear anti-sway bar set for 2006 Ford Fusion.

The ST suspensions anti-sway bars for the 2006 Ford Fusion (4 cylinder and V6) replaces both front and rear stock anti-sway bars with larger diameter solid construction anti-sway bars. The stock front anti-sway bar diameter is increased from 24mm to 27mm. The rear bar is increased from 16mm to 19mm. The result is a 60% increase in anti-sway bar force for the front axle and 100% on the rear axle.

Performance and comfort characteristics are taken into consideration with each ST suspensions anti-sway bar design. Incorporating 20 plus years of design experience, ST suspensions anti-sway bars are manufactured from cold formed solid steel and use swaged ends for their superior strength and reliability. All ST suspensions anti-sway bars include high grade mounting hardware, polyurethane bushings and are powder coated for a lasting finish.

4cyl.	Front	- # 50301
V6	Front	- # 50300
All	Rear	- # 51300
Set	4cyl.	- # 52301
Set	V6	- # 52300
