## **PRESS RELEASE**

June 2007

IMMEDIATE RELEASE

### **ST suspensions Anti-Sway bars for Volkswagen Golf Mark V**

ST suspensions (formerly Suspension Techniques) announces their front and rear anti-sway bar set for Volkswagen Golf Mark V.

The ST suspensions anti-sway bars for the Volkswagen Golf Mark V replaces the stock hollow type anti-sway bar with a solid construction anti-sway bar. The original stock diameters (24mm front, 20.5mm rear) are retained. Sway bar forces are increased 100% on the front axle and 70% the rear.

Performance and comfort characteristics are taken into consideration with each ST suspensions anti-sway bar design. Incorporating 20 plus years of design experience, ST suspensions anti-sway bars are manufactured from cold formed solid steel and use swedged ends for their superior strength and reliability. All ST suspensions anti-sway bars include high grade mounting hardware, polyurethane bushings and are powder coated for a lasting finish.

Front - Part No. 50238  
Rear - Part No. 51238  
Set - Part No. 52238
